

IN THE SPECIFICATION:

Please amend the description on page 1, lines 10-17 as follows:

A1
The present invention relates to a fiber reinforced epoxy resin product and a method for manufacturing thereof; more particularly, to a fiber reinforced epoxy resin product comprising a hardened epoxy resin mixture including epoxy resin, silica and reinforcing fiber materials such as glass fiber, carbon fiber, or aramid fiber ~~or Kevlar fiber~~, and at least one layer of ~~fiber glass~~ fiberglass roving cloth and a method for manufacturing thereof.

NE Please amend the description on page 3, line 4 as follows:

A2
In accordance with another preferred embodiment of the present invention, there is provided a fiber reinforced epoxy resin product, comprising a hardened epoxy resin mixture including epoxy resin, silica and a fibrous material, wherein the fibrous material is a material selected from the group consisting of glass fiber, carbon fiber, and aramid fiber ~~and Kevlar fiber~~ or a mixture thereof; and at least one layer of glass fiber roving cloth is arranged parallel to each other in the hardened epoxy resin mixture.

Please amend the description on page ~~7~~, line 21 to page 8, line 3 as follows:

A3
Step (d): Epoxy resin is mixed with reinforcing fiber materials in a ratio of 9 to 1 and the mixture is cast onto the first fiber mesh (30A) which was impregnated with the epoxy resin (a first casting process). The mixture includes the epoxy resin, a small amount of cement, silica and chopped reinforcing fiber material. The reinforcing fiber material is a material selected from the group consisting of glass fiber, carbon fiber, and agamid fiber ~~and Kevlar fiber~~ or the mixture thereof.
